Item	Clinical Significance
FeLV-Ag	Feline leukemia virus (FeLV) belongs to the family retrovirus, mammalian retrovirus type C. FeLV mainly affects cats, and kitten are more susceptible than adult cats. The virus is mainly transmitted horizontally through the respiratory tract and digestive tract, but also vertically. Transmitted by milk; Blood-sucking insects can be vectors of transmission. The incubation period averages 3 months, but varies greatly. 83% of infected cats died within 3.5 years.

This result is for clinical reference only, not as a basis for diagnosis!
