Immunofluorescence Test Report

Pet Name: BEN - BAO NGAN

Owner Name:

Tel:

Gender:

Age:

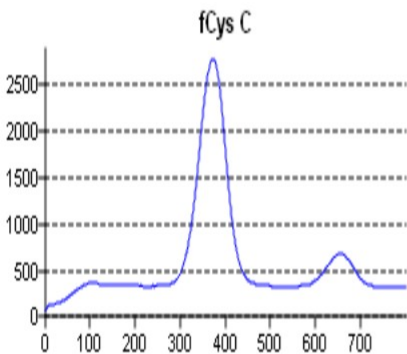

Weight:

Pet Type: feline

Breed:

TestTime: 2024-12-14 14:36:01

Item	Test Result	Conclusion	Ref Range
fCys C	<3.5mg/dL	-	<div><div>0mg/dL7mg/dL10mg/dL</div><div>Normalpected kidney injdicated kidney inju</div></div>

Item	Clinical Significance
fCys C	Canine cystatin C (cCys C), a cysteine protease inhibitor, is widely present in nucleated cells and body fluids of various tissues with constant production rate. Circulating cystatin c is cleared only by glomerular filtration and is an endogenous marker of changes in glomerular filtration rate. Independent of any external factors, such as sex, age, diet, it is an ideal endogenous marker to reflect the change of glomerular filtration rate.

This result is for clinical reference only, not as a basis for diagnosis!
